

# RoboCup 2017

Nagoya Japan

27 to 30 JULY COMPETITIONS  
31 JULY SYMPOSIUM

## **RoboCup2017 WirelessLAN Guideline • Rules • Operation (Draft)**

The RoboCup 2017 Nagoya Local Organizing Committee

**Ver.0.8**

2017/ July /23

## <Guide>

# Policy and Concept Regarding the Use of Wireless Devices at RoboCup

1. The RoboCup Local Organizing Committee (LOC) will coordinate the use of radio resources by visitors and competitors so that the competition can be conducted smoothly.
2. The Committee will assign radio frequencies (LAN channels, etc.) to all leagues participating in the competition.
3. Each league should use the assigned frequencies (LAN channels, etc.) to ensure trouble-free operation during the competition.
  - Each league can use the specified frequencies preferentially.
  - Where particular circumstances of a league (competitor) require the use of frequencies other than those assigned, the league's representative should coordinate with the representatives of other leagues.
4. Each league/competitor is not allowed to use radio frequencies in a way that affects the progress of the competition.
  - All activities at the competition must comply with local laws and regulations on wireless use.
5. Any operational failures of the robots that are thought to be caused by radio interference should be resolved by the competitors experiencing the failure.
  - If radio interference is caused by other leagues, the chairs of the relevant leagues and the Committee will assist in resolving the problem, if necessary.

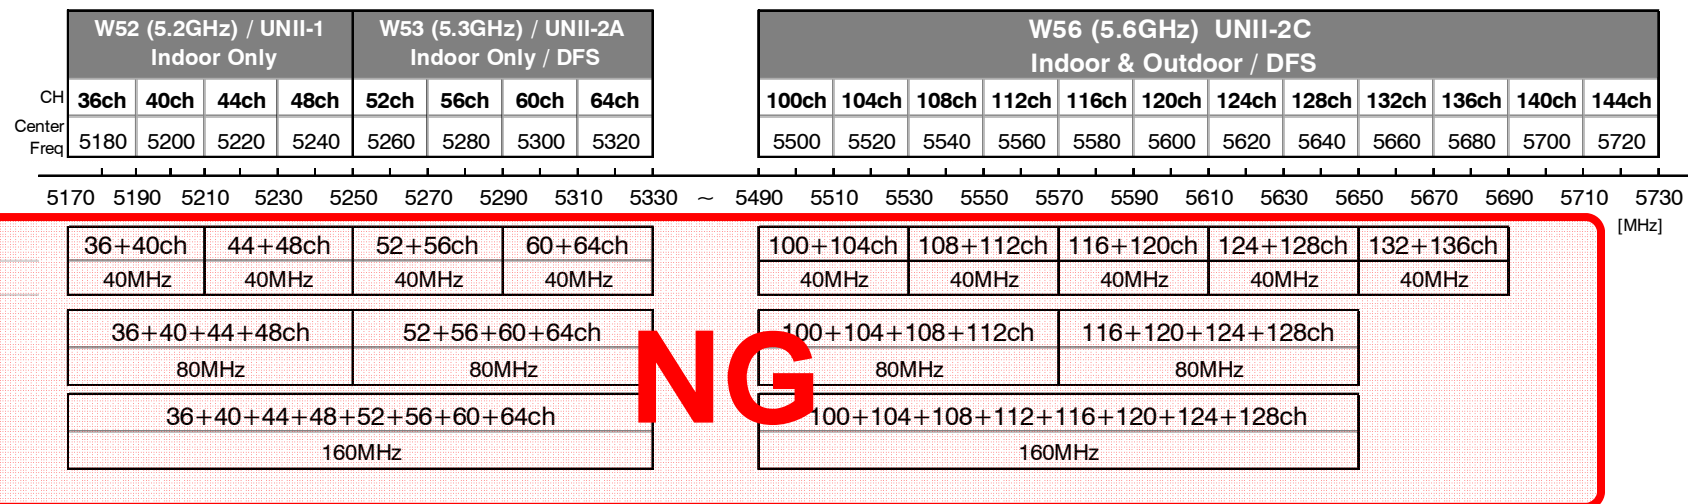

## <Common Rules> for 2.4 GHz and 5 GHz Wireless LANs

- Generally, is prohibited to use any radio frequencies other than those assigned to each league.
  - See the attached table.
- It is prohibited to use “Channel Bonding”(Dual Channel / Wide Channel / Ethernet Bonding) that uses several channels (40, 80, and 160 MHz-frequency bands) simultaneously.
  - IEEE 802.11a/b/g/n/ac uses 20 MHz per channel.
- It is prohibited to use any Wireless LAN AccessPoint (AP) other than one installed by the Committee.
  - For Rescue Robot Leagues, each team can use an AP.
- When an AP is installed and set, the following information should be indicated on the AP.
  - SSID  
Wireless Standard (e.g. 2.4 GHz/5 GHz, IEEE802.11ac/a/b/g/n)  
Channel used (1ch, 5ch, etc.)

## <Reference> Channel Bonding

- Rules for 2.4 GHz and 5 GHz Wireless LANs at RoboCup:
  - “Channel Bonding” is a logical procedure for utilizing multiple connections (channels) for increased throughput.
  - Dual Channel / Wide Channel / Ethernet Bonding,

Radio:
☒ Radio 1 (5 GHz)
☐ Radio 2 (2.4 GHz)

Mode:
802.11a/n/ac

Channel Bandwidth:

20 MHz
20 MHz
20/40 MHz
80 MHz

Primary Channel:

Channel:
100

Spectrum Analysis Mode:
Disable

OK (20MHz)
NG (20/40MHz, 40MHz, 80MHz, 160MHz)

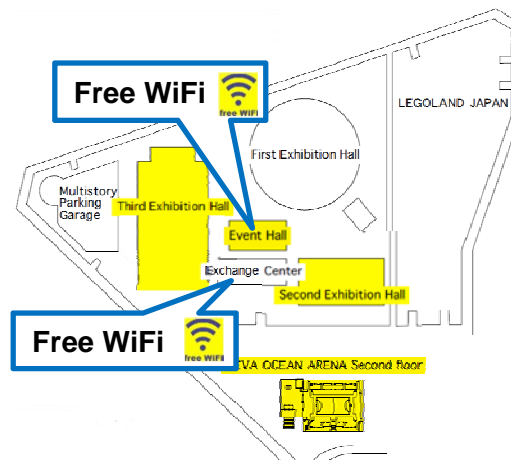

## <Common Rules> for Each League

- **It is prohibited to use wireless functions of PCs and peripheral devices that are not used in the competition.**
  - It is prohibited to use wireless mice and keyboards (and other wireless peripheral devices using any frequency).
- **Generally, it is prohibited to use “Mobile Wi-Fi routers”.**
  - It is prohibited to use the tethering function of a smartphone or mobile router.
  - Using a wired connection (e.g. USB connection), however, is allowed.
- **The Wireless LAN and Bluetooth functions of all portable devices must be turned off.**
  - The Wireless LAN and Bluetooth functions of smartphones, iPhones, tablet PCs, iPad and other devices that are not used in the competition should be turned off.
  - It is prohibited to use Bluetooth headsets with mobile phones, as well as other wireless headphones with music players.
- **It is prohibited to use any type of portable game machine in the venue.**
  - Portable game machines include “Nintendo Switch” and “Nintendo DS series”.
    - It is prohibited to use any portable devices whose wireless on/off status cannot be confirmed externally.
- **Mobile phones(3G/4G/LTE) is allowed.**

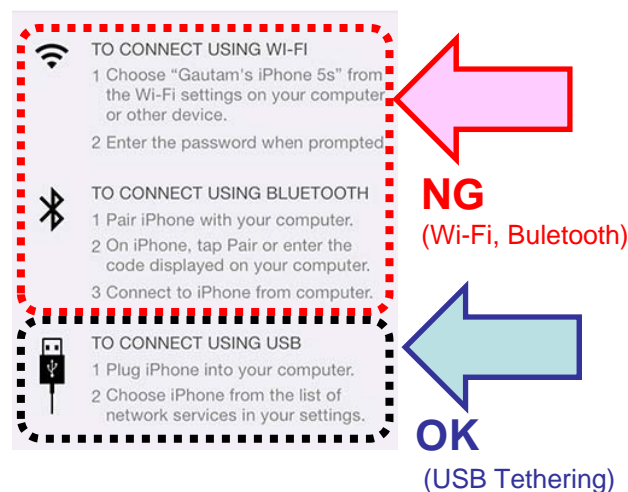

## <Reference> Internet Environment Provision

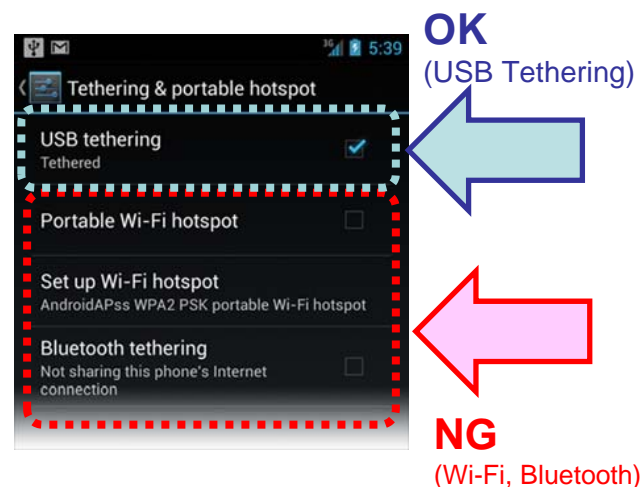

- FreeWi-Fi will be installed in “Event Hall” and ”Exchange Center”

- Tethering of Smartphones and Mobile routers can only "USB Connection"

iPhone USB Tethering

Android USB Tethering

## <Rules> 2.4 GHz Devices

- **For the 2.4 GHz band, only the following standards are allowed.**
  - Major: Wireless LAN (IEEE 802.11b/g/n/ac)
    - \* It is recommended to unify the standard (to 11b/g/n/ac) within each league.  
Using several standards simultaneously decreases the communication speed.
    - Wireless devices must be able to set the frequency to be used and select from among the 14 channels for wireless LANs.
    - Only Small Size Soccer Leagues can use ZigBee (IEEE 802.15.4).
  - Junior: Bluetooth (IEEE 802.15.1)
    - For radio output, only Class 2 (2.5 mW) and Class 3 (1 mW) are allowed.
      - Class 1 (100 mW) devices cannot be used.
- **For Wireless LAN channels, channels [1ch, 5ch, 9ch and 13ch/14ch ] can be used.**
  - In principle, it is better to use channels 1, 6 and 11. However, since the number of leagues has increased, all of the above four channels will be used.  
Since areas of approximately 1 MHz of each channel overlap the neighboring channels, communication speed is slightly reduced.
- **It is prohibited to use Wireless LAN devices that cannot set the frequencies.**
  - APs that dynamically change frequencies (by frequency hopping) are not allowed.
- **Generally, it is prohibited to use wireless devices with proprietary standards, such as:**
  - Wireless game controllers
  - Video transmitters (video transfer equipment)
  - Radio-control transmitters using the 2.4 GHz band

# <Rules> Bluetooth (IEEE 802.15.1) / ZigBee (IEEE 802.15.4)(2.4 GHz)

- **Junior Leagues can use Bluetooth devices under the following conditions:**

- Standard: Version 1.2 or later
- Output: Class 2 (2.5 mW) or Class 3 (1 mW)
  - Class 1 (100 mW) devices are not allowed.
- If it is confirmed that a Bluetooth device affects the devices used by Senior Leagues, its use should be immediately stopped.
- Senior Leagues are not allowed to use Bluetooth devices.

Class	Output	Use
Class 1	100 mW	<b>NG</b>
Class 2	2.5 mW	OK
Class 3	1 mW	OK

Version (Standard)	Use
1.0b	<b>NG</b>
1.0b+CE	<b>NG</b>
1.2	OK
2.0 (2.0+EDR) or later	OK

- **Only Small Size Soccer Leagues, Junior Leagues can use ZigBee (IEEE 802.15.4).**

	Junior			Junior			Junior			Small Size Soccer League						

## <Rules> Radio Control

- **Generally, it is prohibited to use a radio-control transmitter in competition.**
- **26 MHz, 40 MHz, and 72 MHz for radio control**
  - When using the above frequencies, approval should be acquired from the Committee in advance (concerning permitted frequencies and bands).
  - Measures for changing frequencies should be provided.
    - Preparing several crystal oscillators, etc.
- **Radio-control transmitters using the 2.4 GHz band are not allowed.**
  - It is prohibited to use radio-control transmitters using the 2.4 GHz band from any manufacturer.
  - \* Since the frequency characteristics of these devices are not standardized, whether each device causes interference has currently not been confirmed.

## <Other Rules> for Exhibitions by Companies

- **Generally, it is prohibited for company exhibitors to use wireless.**
  - Only the 5 GHz band can be used in Second Exhibition Hall.
- **Food exhibitors**
  - Food exhibitors cannot use microwave ovens, wireless POS devices (e.g. cash registers, bar code readers).

Microwave  
**NG**

- **Wireless microphone is prohibited in principle**
  - Wireless microphones that do not use 800MHz/2.4 GHz are conditional and acceptable.

Wired Microphone  
**OK**

Wireless Microphone  
**NG**

## <Operation> Radio frequencies management

- **Radio frequency managed by RoboCup2017 is "2.4 GHz / 5 GHz band" only**
  - Do not manage except the 2.4 GHz / 5 GHz band in principle
- **In case of radio trouble, adjust between leagues through radio manager of each league**
  - LOC appoints a Radio Surveillance at the 3<sup>rd</sup> Exhibition Hall
  - Radio Surveillance monitors 2.4 GHz / 5 GHz band
  - When the Radio Surveillance can confirm the problem, it reports to the LOC of the corresponding league and supports the adjustment
- **It is prohibited to connect Wi-Fi to Internet line (Wired LAN)**
  - However, except the following
  - Wi-Fi prepared by the LOC
  - @Home league (3<sup>rd</sup> Exhibition Hall) Wi-Fi to use in competition

# <Operation> Assignment of Preferred Wireless LAN Channels
